

Health Canada is conducting an evaluation of the Communicable Disease Control (CDC) Cluster within the First Nations and Inuit Health Branch (FNIHB). It will evaluate the effectiveness and relevance of CDC's programs (which include HIV/AIDS Strategy and Sexually Transmitted Diseases, Vaccine Preventable Diseases and Immunization, and Tuberculosis and Respiratory Infections) in contributing to the improved health status of First Nations and Inuit people.

Your feedback is valuable. Please complete the appropriate online questionnaire and take the opportunity to give honest and constructive feedback on the Communicable Disease Control programs.

The online evaluation questionnaires are now posted at the following Internet addresses:

<http://chr-rsc.ca/> (community health representatives);

<http://www.cdc-evaluation.ca/> (health directors and community health nurses)

<http://cdc-coordinator.ca/> (CDC regional coordinators).

You may also be contacted by the contractor via telephone.

Participation in the evaluation is voluntary and all responses **are strictly confidential.**

The opinions and individual feedback from participants will be kept confidential and will remain anonymous throughout the entire process. We will not share the individual responses with any other parties. All information you provide will be kept confidential and only aggregate data will be used in our report.

If you have any questions or concerns about the Relevance and Effectiveness Evaluation please contact the person below.

Thank you in advance for your participation in and support for this important work.

Natasha Hradil-Heeler
